

i am an INNOVATOR

National Aeronautics and
Space Administration

The new Radio Frequency Identification (RFID) system implemented at WSTF is a prime example of innovation and the “team” attitude shared at this facility. This project was a joint collaboration between the two prime contractors, NTEC and EASI, to solve a long-standing issue of asset accountability and property management. This system is NASA’s first successful implementation of an RFID asset and property management system. With this system’s integration of Google Maps™, it allows for real-time tracking to show an item’s exact location on site. This project was made possible by the efforts of Jim Edwin, NTEC Business Manager; Jim Watkins, FOSC Business Manager; Ben Sanders, NTEC Financial IT Systems Administrator, who designed, installed, and deployed the system; and Peter Heredia, FOSC Logistics Supervisor, who implemented, integrated, and now maintains the system.
